-

- **Login**

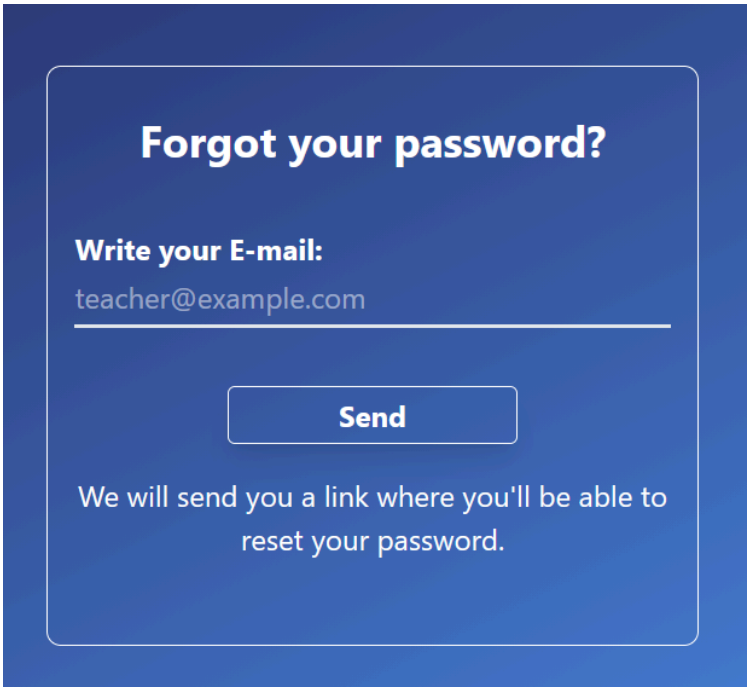

In order to access the app, you must enter your email and password. If you forgot your password, click the "**I Forgot Password**" link to reset it.

- **I forgot my password**

In order to reset your password you have to click the link "**I forgot my password**" in the login screen.

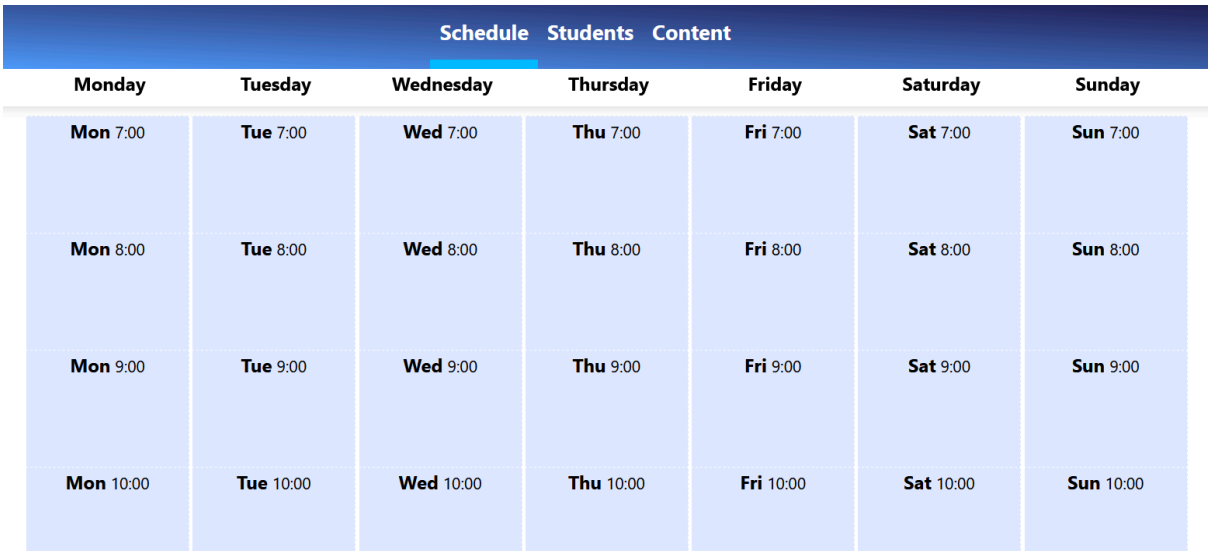

This will take you to the screen where you will enter the email address you use to log in to **Class Scheduler** and then click the **Send** button:

You will receive an email with a link to **reset your password**.

Note: The link sent to your email will expire after 10 minutes; past this time, you must restart the process.

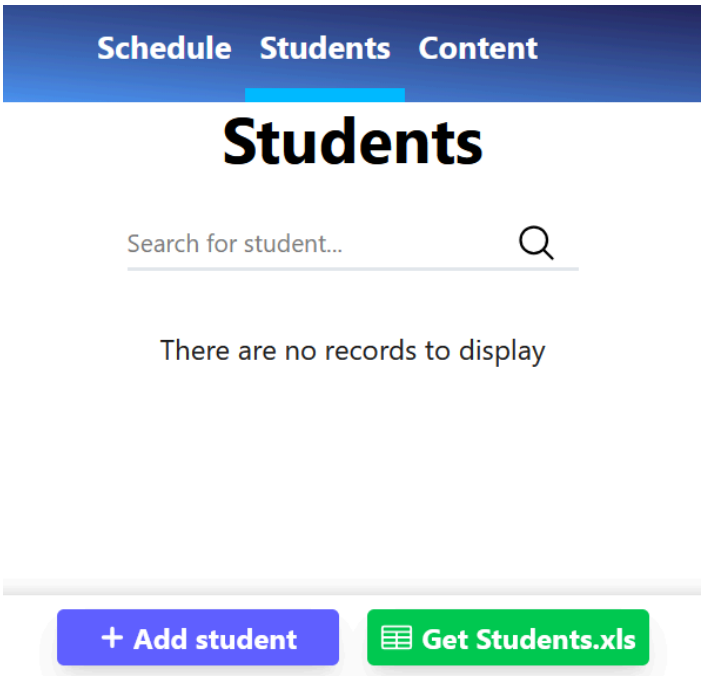

- **Schedule**

After logging in, you will see the **Schedule** screen where you can manage your classes. However, to create a class, you must register a student first.

- **Students**

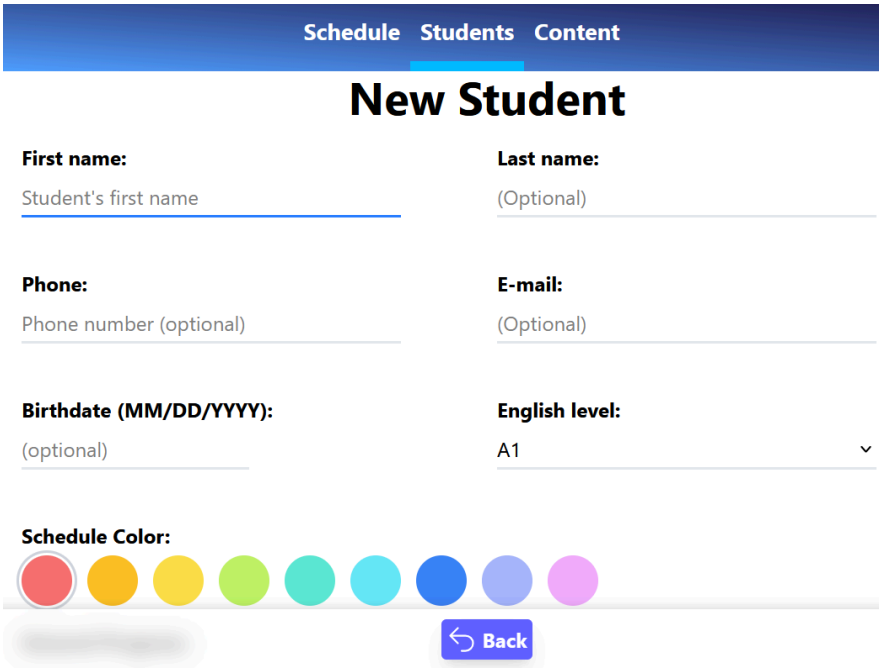

In the Students module you will be able to create a new student.

- **Create a student**

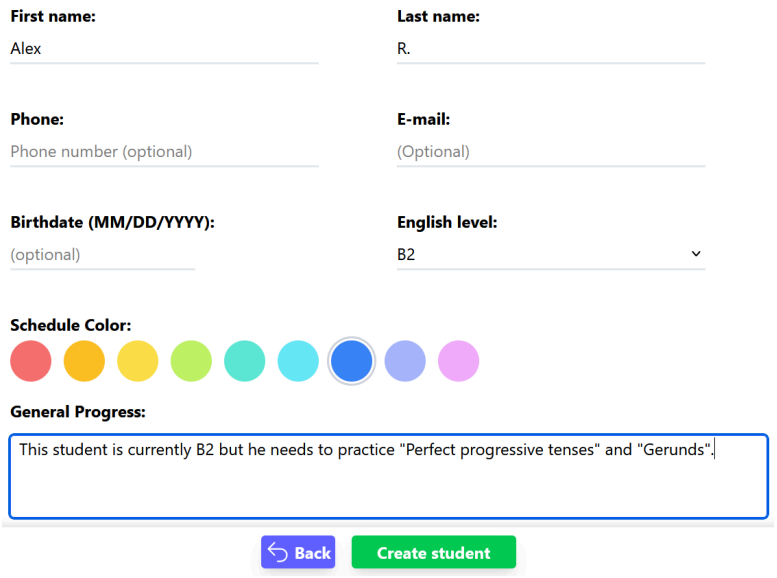

In the “**New Student”** form you will fill in all the necessary fields with your students' information.

Here you can enter your student’s birthday, email, etc. but the only mandatory field is first name.

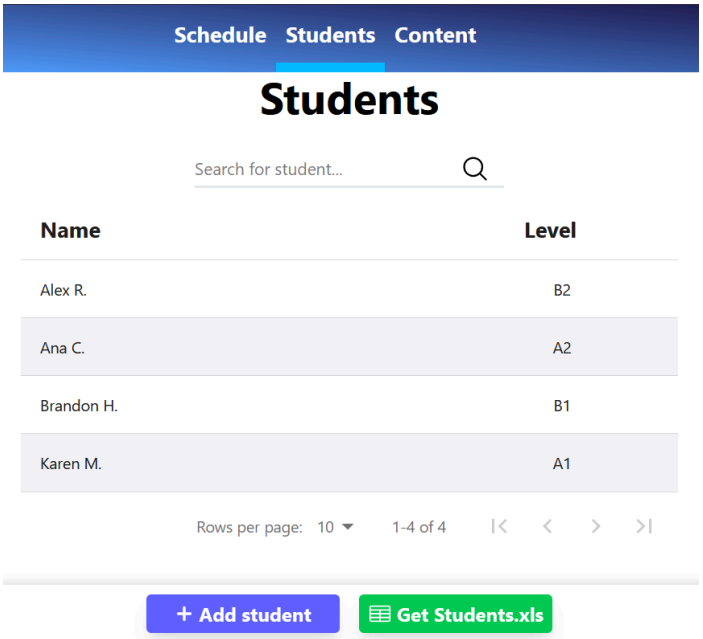

The **Schedule color** options allow you to choose which color the student’s classes will display on the **Schedule** screen.

In this screen you will define the English level of your student and below you will find a text area to fill in with a general idea of your student’s english level:

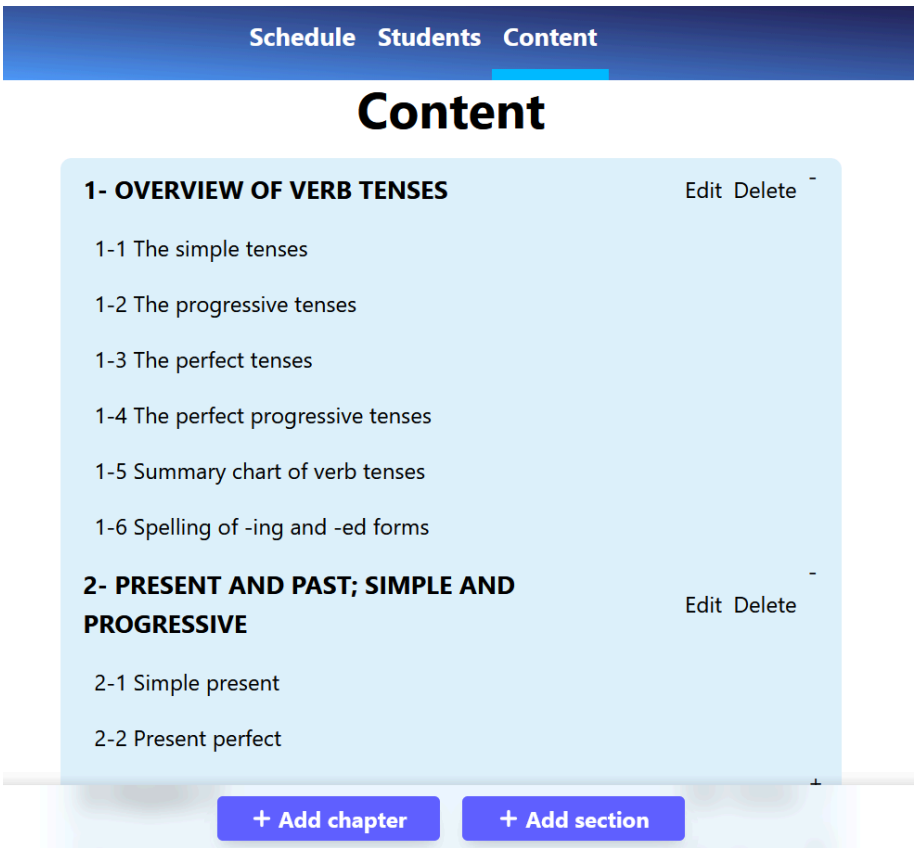

Once you create a student, they will appear in the list. You can also download an **Excel file** containing all student information.

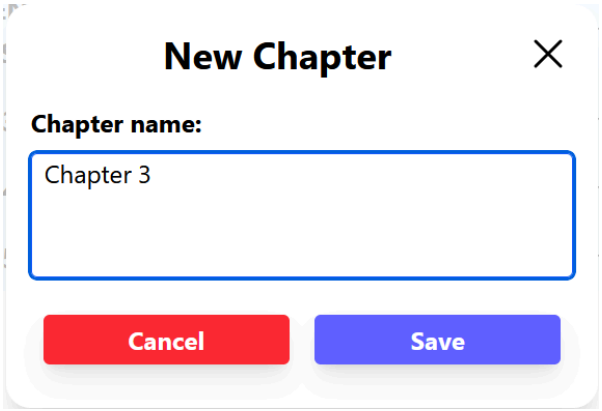

- **Content**

The **Content** module is useful for keeping track of students' progress. The main objective is to register all course topics and mark those the student has already completed.

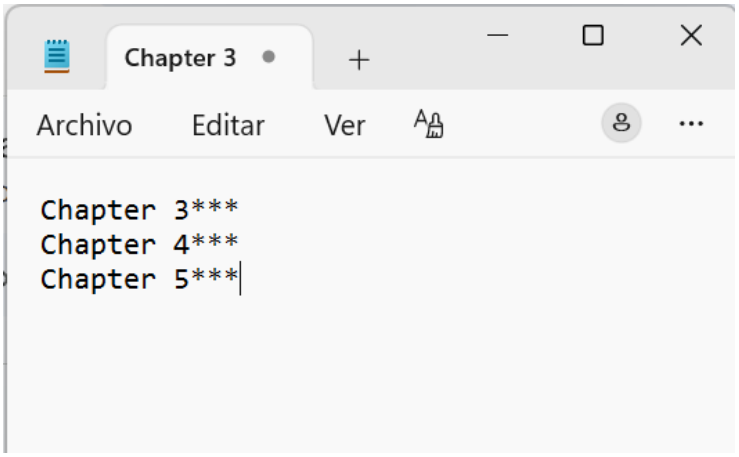

- **Create a chapter**

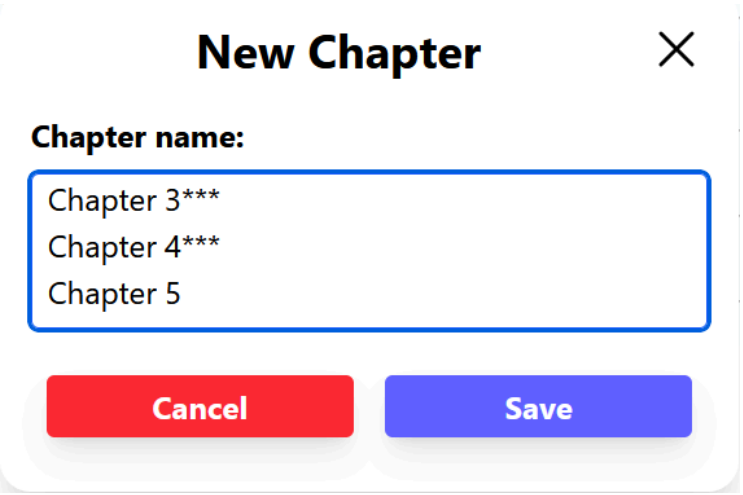

To create a new chapter you can just write the Chapters name like this:

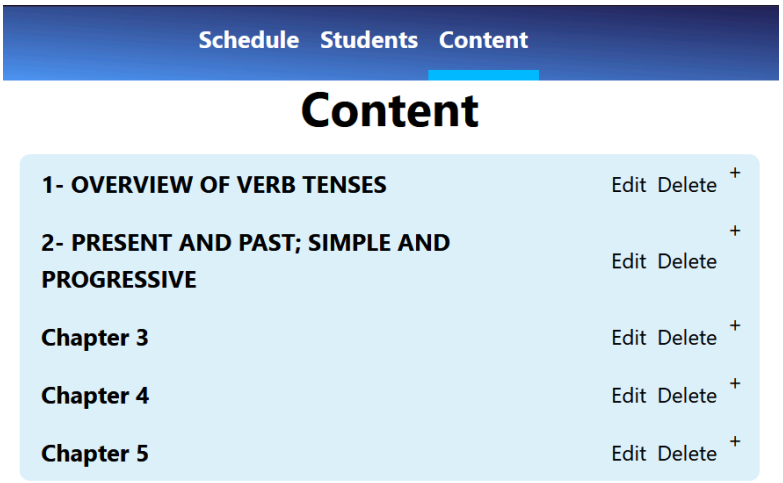

But you can also create several chapters at once. To do this you only need to separate the chapter names using three asterisks. For better readability you can use the text editor of your choice, for example, you can list the chapter names in a Windows Notepad:

Once you have completed the chapters list, you only have to copy and paste them in the **New Chapter** modal:

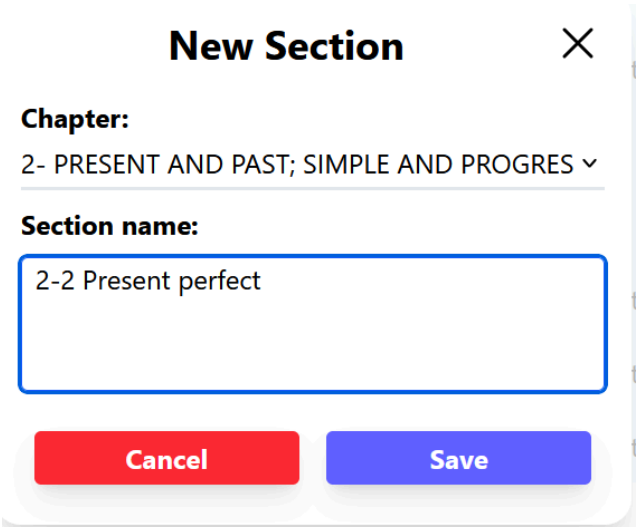

After saving the list, you will see the new chapters created:

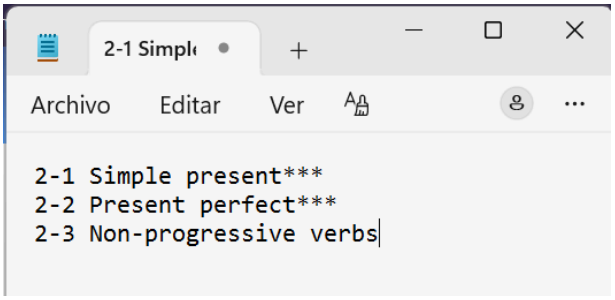

- **Sections**

Each chapter is divided into sections. To create a section, you only have to specify which chapter the section belongs to. For instance, you can add the section '2-2 Present perfect' to the chapter “2- Present and past”:

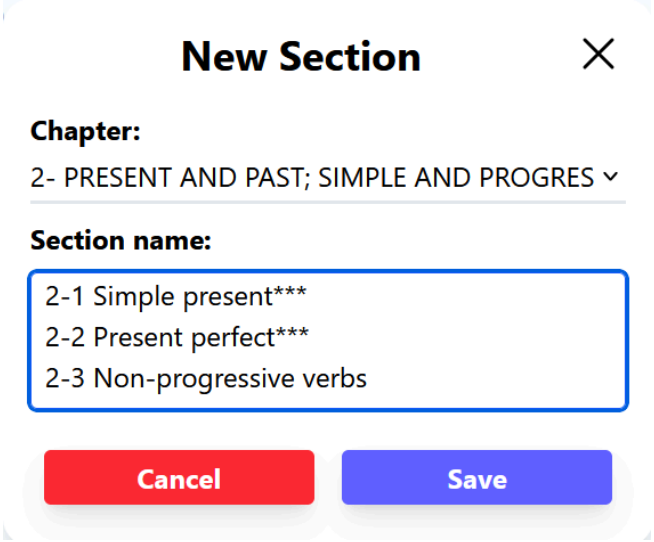

- **Create multiple sections at once**

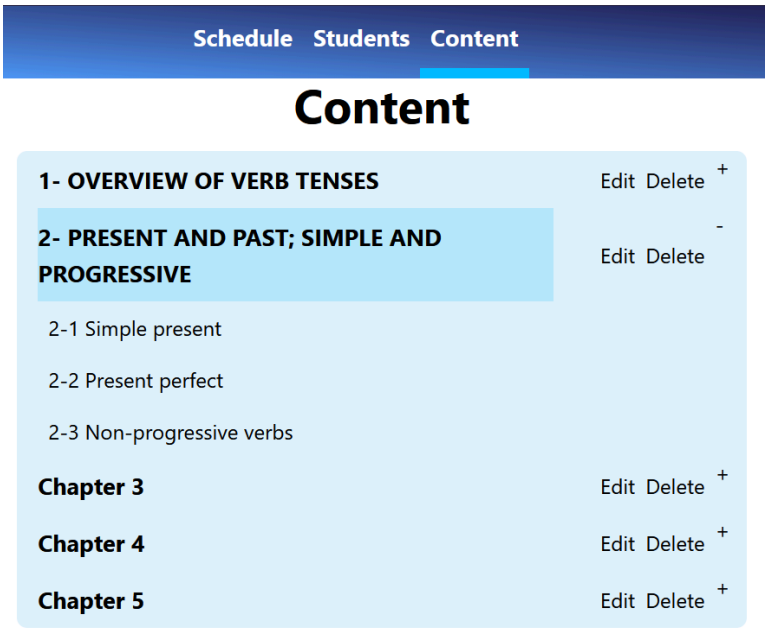

As with the chapters, you can also create multiple sections at once by separating them using three asterisks:

Finally, you only have to paste the list in the New Section modal and press **Save**:

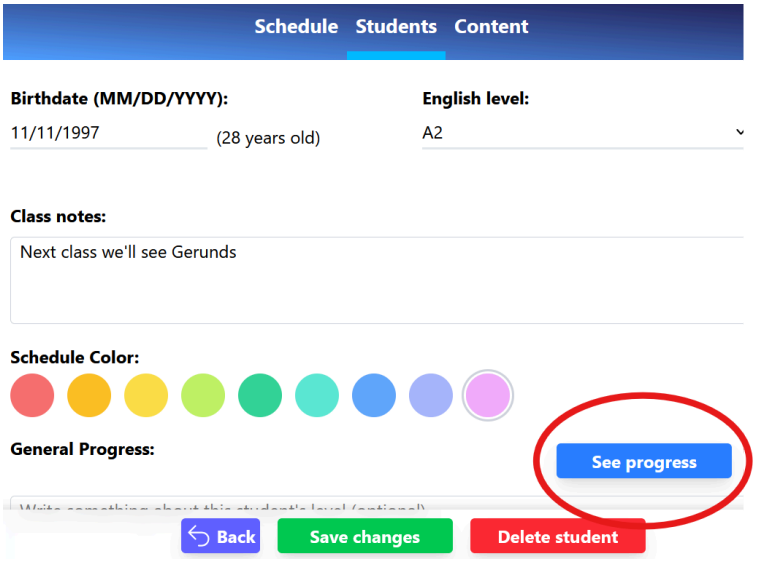

You will now see the newly created sections within your chosen chapter:

- **Students' progress**

Once you've created sections in the Content module, you can update your students' progress. Just go to the **Students** module, select a student, and click **"See progress"**.

This opens a list of chapters and sections where you can mark which topics your student has already seen:
